Administering Medication Policy

This Policy also includes Before and After School Provision.

Statement of Intent

The staff and governors of Howe Green House School believe that we should provide a caring, positive, safe and stimulating environment, which promotes the intellectual, social, physical, and moral development of the individual child.

Policy Statement

The aim of this policy is to effectively support individual children with medical needs and to enable pupils to achieve regular attendance.

Parents should not send a child to school who is not well enough to fully participate in the school day, or if they have an illness that has the potential to be passed on to other staff and children.

Non Prescriptive Medicines

The school will not administer any non-prescribed medicine to a child e.g. cough medicine, homeopathic remedies, ***over the counter analgesics or antihistamines*** etc.

Prescriptive Medicines

The school will administer medication for life threatening allergic reactions or conditions such as asthma, epilepsy, cystic fibrosis, febrile convulsions etc. The school may also administer medication for long-term chronic conditions such as severe eczema as well as prescribed medications when dosages cannot be configured to occur outside of the school day and where medical advice has been given that a child is well enough to be in school.

The school will administer the medication within the procedures set out in this policy. Medication can only be administered if written consent has been obtained from the parents or guardians using the appropriate form.

It is the parents' responsibility to tell the school about a pupil's medical condition and how it may affect him/her. Parents are also responsible for informing the school of changes in a pupil's medical condition, including the need for changes to medication.

With the exception of adrenaline auto-injectors , and insulin, the school cannot administer or manage any Intra-venous or Intra-muscular medication.

Where children are prescribed short term medication or new medication the child must have received the initial doses of the medication for at least twenty-four hours (at least two doses) before the school can take responsibility for administration.

Parents are also responsible for ensuring the school are aware of any allergies the child has and any potential side effects the medication may cause.

If medication is to be administered by the school, it is the parent's responsibility to ensure that there are no contra-indications with any other medication the child receives. Parents will be required to confirm that they have checked for contra-indications and that there are none before the medication can be administered.

Any medication to be administered must carry a pharmacy label that indicates the child's identity, the prescription date, the dose and frequency of administration and the administration route. The medication must also contain a clear expiry date. Unlabelled medication cannot be administered by the staff.

Where medications are liquid suspensions parents are required to provide an appropriate means of administration such as a spoon or syringe. These must be appropriate for the required dose to ensure that accurate dosage can be administered.

Where a child has a life threatening condition the parents will be required to complete a medical disclaimer & health plan form and supply a copy of the treatment plan. The form requires parents to confirm:

Diagnosis of condition;
medication prescribed;
dosage;
how administered e.g. is a spacer needed for asthmatic medication or in the case of tablets do they need to be crushed;
time of dosage;
source or cause of allergy, asthma or medical condition;
symptoms;
what foods or activities should be avoided.

Allergies

Contra-indications check

The consent form also confirms that parents understand:

all staff are acting voluntarily in administering medication;
the school is not responsible for the loss of, or damage to, any medication;
the school and its employees cannot be held liable for any missed medication.

In the case of an anaphylactic allergy the school also requires a copy of the protocol issued by the consultant stating the cause of the allergy and the procedure to be followed in the event of an attack.

Staff Administration

Only staff who are willing to undertake the administration of medication can be required to do so. Staff will be trained in the safe administration of medication. Where there are specific needs the staff will have specific training in the preparation and administration of this medication. This will be done in partnership with the parents of individual children where necessary and in accordance with the child's health plan.

Where routine oral medication is to be administered the staff member must follow the following process known as the 5 point process:

Check the medication label for:

1. *Child's name*
2. *Dose*
3. *Time*
4. *Expiry date*
5. *Check the child's health plan for allergies*

The medication will then be prepared for the correct dose and be checked by a second staff member (where available) before being administered to the child. The staff member must ensure that the child swallows the medication.

If a child spits out the medication or some is spilt in the process of administration the child should not be given any more medication. It should be recorded and the parents informed. Where it is apparent that the child is having difficulty taking the medication the school may decide to cease their administration responsibility. Alternative means of administration will be discussed with parents in these cases.

Storage of medication

A list of children's medical conditions will indicate the number of medical packs, which contain adrenaline auto-injectors, asthmatic inhalers etc. and their location. However the main pack will always be stored in the Bayford Hall kitchen. Where a second pack has been provided this will be stored in the child's classroom out of reach of children.

Prescribed medication will be stored in a locked draw or locked fridge in the Reception Office.

Administration on school trips, residential visits

Where there are children with specific health needs the school will make any reasonable adjustments to ensure that all pupils have the opportunity to enjoy and benefit from such trips. On these occasions staff may consider it necessary to act on behalf of the parent and administer simple analgesics or antihistamines without prescription. Prior to any residential visit each parent will be required to complete a health information form and a consent form to enable teaching staff to act on their behalf in these situations. Medication will only be administered when deemed necessary and each situation would be assessed on a case by case basis.

Self-Management

For reasons of safety the school does not allow the children to carry their own medication. Staff, and the children who require medication, know where it is held and can access it without delay. In exceptional circumstances the Head will review self-management of medication on a case by case basis.

Disposal of Medicine

Out of date or surplus medicine will be returned direct to parents for safe disposal.

Record Keeping

Medical information is confidential. However, it is the Head's responsibility to decide the limits of confidentiality in order to ensure that the health, safety and well being of all participants is not compromised. Therefore medical information is available to view on the MIS.

A log sheet is housed in the Reception Office and Pre-Prep and Prep classes advise the office the date, time, type of medication, and dosage administered in order for it to be recorded. In the case of Little Oaks Nursery a copy is housed in the Nursery Manager's office.

General

There is no legal duty which requires school staff to administer medication; this is a voluntary role. However in an emergency situation, teaching staff are to be reminded of their in "loco parentis" duty of care to act in the best interest of the child, both in the school and if taking part in off-site activities.

Parents will be informed immediately, or as soon as possible and within 24 hours, when medication has had to be administered.

While every effort will be made to ensure pupils with medical conditions can attend school, it is the Head's decision whether or not medication can be administered safely in school. The Head must be satisfied about the suitability of staff, even after training, materials, equipment and the work environment before agreeing to administer medicine.
